## Greenland: Escaping with Trees and Plants

12.03.2024

On March 12.03.2024 Eco Club committee organized Green landscaping with trees and plants. College Principal Dr.Sarika kumari, faculty members and students of session 2023-25 including collaborated on Green landscaping through the Planting of trees.Greenland, known for its vast ice-covered landscape, is undergoing a significant transformation due to climate change. Rising global temperatures are causing ice sheets to melt at an alarming rate, altering Greenland's ecosystem. A surprising consequence of this warming is the gradual expansion of trees and plant life in a region previously dominated by ice and snow.

### Objectives

Increased plant life can absorb carbon dioxide, slightly reducing greenhouse gas levels.

New ecosystems could support wildlife such as insects, birds, and small mammals.Potential agricultural opportunities in Greenland's southern regions.

### Conclusion

Greenland's escape from an icy past to a greener future is a clear indicator of global climate change. While the emergence of trees and plants may seem like a positive development, it also raises concerns about the long-term environmental consequences.
